

Record of Changes to GIS Strategic and Business Plans for Idaho's Spatial Data Infrastructure, from comment versions presented to IGC to this printing: Strategic Plan version 1.0 and Business Plan version 1.1
March 16, 2009

At the time the final draft of the Business Plan was presented to the IGC, the GIO noted several items in the Business Plan that affected the Strategic Plan and that the two plans would need to be synchronized prior to publication. The following is a list of the items from the Business Plan that are corrected in the Strategic Plan. These changes were incorporated into versions 1.0 of both Plans.

1. Change made to priority of Land Development Planning business driver from moderate to high to better reflect stakeholder input. SP page 66, BP page 26
2. Eliminated reference to possible size of Idaho Geospatial Council. SP page 29, BP page 14
3. Replaced definition of SDI with more robust definition. SP page 1, BP page 1
4. Adjusted Regional Resource Center description to promote flexibility and custom tailoring to regional needs. SP page 29, BP pages 14, 74
5. Attribute source of US graphic showing SDI coordination. BP page 21
6. Footer alignment and updating, minor grammatical and typographical corrections

Since the final draft of the Business Plan was presented to IGC and ITRMC, two updates have been made to the cost of one Framework dataset and the status of another. The revised costs were added now rather than later because of their significance. The following is a list of updates, which are contained in the Business Plan version 1.1.

1. Federal land parcels are 80% complete, not 40%, page 87
2. Additional cost estimates provided for Geodetic Control, Height Modernization affected all tables tabulating and totaling costs and increased the overall cost of SDI by \$2.215 million to a total of about \$26.7 million. Pages 50-51, 53, 84-86, 90-91.
